## 5-YEAR ANNIVERSARY FOR OUR CLINIC!

This issue of *The Fledgling* celebrates the five years spent in our wonderful leased location at the Rio Grande Nature Center State Park. Inside we have provided a summary of half a decade of activity in the wildlife acquisitions arena. On page 2 you will find the data-spread of the entire 5 years, illustrating the diversity of species we receive.

This is the 27th year for this newsletter — and WRI is going digital.

This time we need one specific response from each of our readers. As we want to focus the majority of funds from the *Share with Wildlife* Program (NM Dept. Game and Fish) and our public on materials for care, *WRI is going digital*! We expect this to be last printed *Fledgling* to be produced – future issues will be sent electronically and will be available on our website ([wrinm@wrinm.org](mailto:wrinm@wrinm.org)). If you wish to receive further communications such as this, send us your email information.

Please send your name and e-mail address to: [wrinm@wrinm.org](mailto:wrinm@wrinm.org)

Please put "WRI NEWSLETTER" in the subject line!

If you do not have e-mail, send your current mailing address to the editor at Wildlife Rescue's mailing address (shown in the panel at left) to continue receiving a print version. We appreciate your interest and continuing support!

— Janelle Harden, Editor

## IT HAS BEEN AN amazing five years

since Wildlife Rescue, Inc. of New Mexico (WRI) moved into our new digs at the Rio Grande Nature Center State Park. Just as we had predicted, once the public knew where to find us, we were incredibly busy! For those of you who weren't with us prior to our current

location, we were very nomadic. WRI only had various temporary donated facilities during the busy season – and we were hardly ever in the same place twice. The public had to hunt us down every year in order for them to bring us injured/orphaned wildlife. Once the season was over we all dispersed and regrouped the following year to start it all over again. New Mexico Game & Fish was heavily involved in those days. They were a drop off point for the public and WRI would go by the Albuquerque office to collect all the animals. It was interesting to see the boxes of baby birds being kept on top of their computer monitors in order to keep all these intakes warm while waiting for a pick up! Game & Fish was quite relieved to have us established in a permanent facility.

Since those days we have developed an amazing clinic team. This season we are extremely fortunate to have over 40 dedicated volunteers and 16 great managers and subs at our clinic. They not only care for New Mexico's wildlife, but also the concerned public attached to the animals.

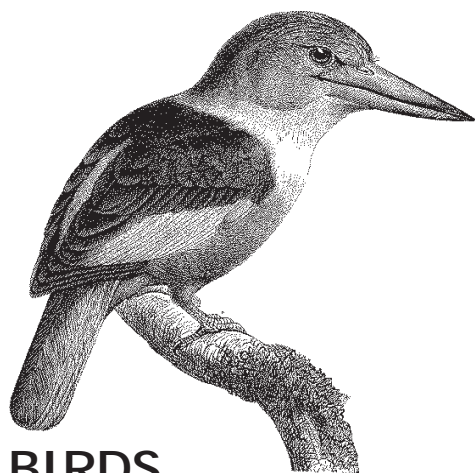

There's more to WRI than just the clinic. There are 10 volunteers handling the difficult job of phone volunteering. Transport people are invaluable for the occasions when an animal needs to get to a rehabilitator quickly. Many of our phone volunteers have gone beyond the call of duty by dealing with a call and hopping in their car to get the animal. We have 30 active rehabilitators trying their best to save wildlife one animal at a time. WRI also has volunteer personnel who collect and manage our data, file annual reports, and network with the scientific community about our activities and discoveries.

I'm extremely proud to be a part of this team of incredible people.

— Denise Coil, Clinic Director

# WILDLIFE RESCUE INC. OF NEW MEXICO

## Summary of Acquisitions 2002–2006

## BIRDS 2002–2006

### A Note About Wildlife Rescue's Data Analysis

WRI is required to collect data on animals we receive for both the U.S. Fish and Wildlife Service and the New Mexico Department of Game and Fish. We also use our data to study trends in local wildlife populations.

WRI's four major data categories are: (1) **acquisitions** - the number and species of animals we receive, (2) **dispositions** - release rates, (3) **causes of encounter** - why animals are found and brought to us, and (4) **locations** - where animals are found.

#### Acquisitions

Our acquisitions increased 47% from 2001 to 2006. Whoa! If you're thinking that's a lot – so are we!

Overall, our acquisitions consist of 85% birds, 13% mammals, and 2% reptiles and amphibians.

*Avian Acquisitions continue next page*

(continued from page 2)

**Dispositions**

As is normal for wildlife rehabilitators across the country, WRI has higher release rates for young, uninjured animals (about 70%) than we do for adult injured animals (about 30%).

**Causes of Encounter**

The most common cause of encounter for birds (over 17%) and mammals (over 19%) brought to WRI is "cat caught." Unfortunately, few people understand the impact loose cats have on our wild bird and small mammal populations. Our message: please keep your cats inside! It's safer for them *and* the wildlife!

**Locations**

In 2006, we received more animals found outside of Albuquerque than ever before. This may be due to our growing education and outreach programs. We're reaching people all across the state, and more people know about us now than ever before!

**RAVEN**

Through the RAVEN Project, in which WRI has been working with CNM students to develop a comprehensive data analysis program utilizing GIS technologies, WRI has been able to map our acquisitions. We've discovered certain "hot spots" in Albuquerque from which we get large numbers of animals. You will be able to view this interesting map in the next issue of *The Fledgling*, which will carry a more detailed article about the RAVEN Project.

WRI believes our data can be an important tool for monitoring and understanding our local wildlife.

It takes a lot man- and computer-hours, and we're always looking for help with data entry and other related tasks. If you'd like to help, please let us know by leaving a message for Anne at the WRI number, 344-2500.

— Anne C. Russell  
WRI Data Manager

## Cedar Waxwings

Wildlife Rescue's data are also useful outside of the organization. In June, a WRI rehabilitator got an e-mail from one of the state's premier ornithologists, in which he said,

*"On June 28, 2007, I was standing under one of our big cottonwood trees here at Pajarito Village when I heard two "plops" on the ground behind me. My search for the sources soon revealed two freshly dead Cedar Waxwing nestlings, which I assume fell from a nest that I have still not been able to discern among the dense foliage! ...they represent the first proof that [we] have of this species' nesting here. In fact, this is only the fourth locality in New Mexico where nestlings are known to have been produced, the others being San Juan Pueblo (now Ohkay Owingeh) in 1995, below Navajo Dam in 2004, and south of Jemez Springs in 2006.*

*I am wondering if... WRI has any nesting or summer records of the Cedar Waxwing from the state? I think it would be great to make such records known to the ornithological and birdwatching communities, which largely remain unaware of rehab programs as a source of this kind of information.*

Rehabilitator Denise Coil just happened to have a cedar waxwing in her care at that time. She responded,

**Cedar Waxwing, continued**

*"The bird weighed 23 grams upon intake and was not self-feeding. It took ten days before he started to eat on his own. The bird is doing quite well. My plan for release is Tijeras."*

The writer was very happy with this information, and replied that *"This record is important as it extends the species' nesting range in New Mexico even farther south, which, as of 2006, was in the Jemez Springs area of the state."*

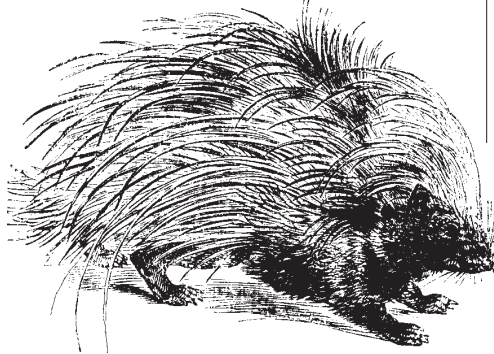

*I have been thinking about this particular nesting record and how its having been found might have gone unnoticed for some time, if I had not thought to inquire about the intakes of this species by WRI!*

*WRI and other rehabbers continue to find out really interesting things about the avifauna of New Mexico!*

Note that this Cedar Waxwing could not have been accepted as a record, had WRI not obtained accurate data on when and where the nestling was found. Wildlife Rescue appreciates the efforts of our rehabbers in accurately recording their data, and the work of Data Manager Anne Russell, who then enters and analyzes it. ■

- <sup>4</sup> 2006 mammal increase of 17% over 2005

### A day in the life...

We received a call on the Wildlife Rescue hotline about a bird that was stuck in a chimney. The gentleman was elderly and had difficulty following our instructions, so Kristin Madden was sent out to rescue the bird. According to the man, it had been stuck in the chimney for several days. Kristin came prepared with all the necessary equipment expected to properly capture the bird as it came down the flue. What Kristin *didn't* expect was the species that emerged. It turned out to be a very irate squirrel. The squirrel then proceeded to run laps around the resident's living room before exiting right out the back door.

This story certainly illustrates that Wildlife Rescue's rehabilitators always must be prepared to expect the unexpected! ■

## Wildlife Rescue's Education Team

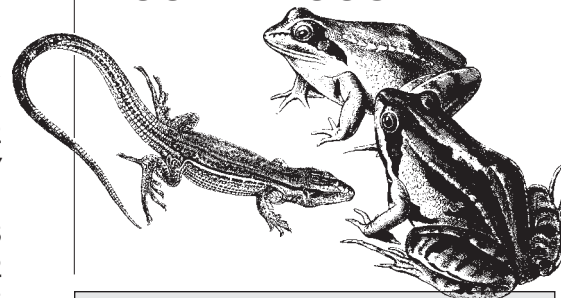

Our great Education Team has certainly been busy this year. During the first seven months they have attended 53 events – which represents over 214 hours of education to both children and adults. Our Education Program is vital, as many people know very little about the wildlife in their area and are unaware of the tremendous impact we all have on the prospects for their continued survival.

The focus of our Education Program is to raise awareness of New Mexico's wildlife and educate the public on the importance of preserving natural habitats for our wildlife. Our program also plays an important

role in raising funds for food, medical supplies, and other miscellaneous expenses because Wildlife Rescue, Inc. is largely dependent upon donations and support provided by the public and local businesses.

Some of the highlights of our programs are the Xeriscape Conference, Hyatt Regency Tamaya Resort, National Environment Week in Carlsbad, Youth Awareness Week in Gallup, the Herb Festival, the NM Outdoor Expo, International Science and Engineering Fair, six Discovery Classes at the Rio Grande Nature Center State Park, four programs at the National Atomic Museum in Old Town, and numerous visits to class-

## REPTILES and AMPHIBIANS 2002 – 2006

### YEAR-BY-YEAR COMPARISON

- <sup>1</sup> 2003 Rep/Amp. decrease of 27% from 2002
- <sup>2</sup> 2004 Rep/Amp increase of 105% over 2003
- <sup>3</sup> 2005 Rep/Amp decrease of -33% from 2004
- <sup>4</sup> 2006 Rep/Amp increase of 123% over 2005

rooms all over Albuquerque. Wildlife Rescue's future also holds some very exciting programs such as the New Mexico State Fair in September, Sevilletta National Wildlife Refuge on October 13, and Bosque del Apache *Festival of the Cranes* on November 16-18.

Our Education Team is growing and is comprised of five Senior Handlers, two Acting Senior Handlers, and 28 conscientious, professional, and personable handlers. Several just recently joined our education team and completed their first Raptor Handling Training class. We have also added some new and interesting displays such as a Feather Identification Book, a collection of non-viable bird eggs, and the nests of some of the native birds you will find in New Mexico.

I offer a hearty "WELCOME" to the newest members of our awesome Education Team, and a "THANK YOU FROM THE BOTTOM OF MY HEART" to everyone in our hardworking, fantastic Education Team. ■
